STATIC PUBLIC-SOURCE ATLAS

Mutation Atlas

A public-source cancer mutation evidence atlas for moving from gene to variant to therapy, pathway, and source context without hiding provenance, freshness, or limitations.

- Explore mutations
- Read methods

99,132

1,853

normalized mutation records

genes with generated pages

22,580

records with actionability signal

8,325

hotspot records

GUIDED ENTRY POINTS

Start with the question you actually have.

The atlas keeps a journal-style front door, then lets expert users drop into a faceted command center when they need precise filtering and exports.

Gene pages

See recurrent variants, cancer breadth, and source coverage for a gene.

Variant pages

Open highlighted variant dossiers with provenance, citations, and related records.

Source cards

Inspect exactly which public sources contribute evidence and where gaps remain.

DYNAMIC EVIDENCE

High-signal records

Generated Apr 19, 2026

Drug-associated records with strong recurrence, source, or hotspot support.

Actionable evidence	Hotspot biology	Cross-source agreement	Clinician review set
BRAF p.V600E THPA			410
BRAF p.V600E SKCM			395.909
EGFR p.L858R Not reported			390
EGFR p.T790T Not reported			390
EGFR p.T790M Not reported			390
EGFR p.A289T Not reported			390
EGFR p.A289D Not reported			390
EGFR p.A289V Not reported			390
EGFR p.A289I Not reported			390
EGFR p.A289N Not reported			390
EGFR p.E746_A750del Not reported			390
EGFR p.K754_I759del Not reported			390

RESEARCH BOUNDARY

What this is not

This atlas does not diagnose, recommend therapy, infer eligibility, or replace a molecular tumor board. It is a static research browser built from public-source evidence and seed annotations.

[Review limitations](#)

Research software only. Not clinical decision support.
